Power BI-to-Excel Coverage

How each Power BI visual type comes out in the Excel export, in both modes (Visuals as data tables, and as Excel charts), and how the export recognises the visual from the report. Every type has an explicit strategy; none fails.

49 built-in visual types

Plus 21 AppSource visuals supported by name, and a generic rule for any other.

Visual types — out of 49

- 16 NATIVE
- 8 CONSTRUCTED
- 1 APPROXIMATE
- 6 TABLE
- 4 FILTER CHIP
- 7 NO DATA · skipped quietly
- 7 NOT EXPORTABLE BY POWER BI · named in the notes

ExportTest report

20 pages, 86 visuals: every exportable built-in type and every supported AppSource visual.

Charts mode outcome — 86 visuals · 0 failed

- 31 Excel charts
- 32 Tables, matrices and rebuilt AppSource visuals
- 9 KPI tiles and trend cards
- 8 Filter chips (slicers)
- 6 Skipped: no data (5), not exportable by Power BI (1)

Strategies, strongest first

A correct table beats a chart that only looks similar: a visual becomes an Excel chart only when the chart keeps its meaning.

NATIVE
A real Excel equivalent: an Excel chart, or an Excel Table with the report's formatting.

CONSTRUCTED
Excel has no such visual, so it is built from Excel parts that keep the meaning: tiles, sparklines, outlines, live formulas.

APPROXIMATE
The closest Excel chart keeps the numbers; the visible difference is named in this report.

TABLE
No Excel chart reads correctly (maps, trees): the data as a formatted table, in the visual's colours.

FILTER CHIP
Slicers become the filter bar: field and selection, "All" when nothing is picked.

NOT EXPORTABLE
Power BI refuses to export the visual's data: the sheet's notes name it, nothing breaks.

Coverage matrix

Tables mode writes every data visual as an Excel Table; Charts mode turns the chart types marked NATIVE into Excel charts with their data on a hidden sheet. ✓ = on the ExportTest report.

POWER BI VISUAL	STRATEGY	EXCEL OUTPUT	FIDELITY	RECOGNISED BY	TEST
BARS AND COLUMNS					
Stacked bar	NATIVE	Stacked bar chart; table with each legend value's cells in its colour	High	`barChart`	✓
Clustered bar	NATIVE	Clustered bar chart; measure headers in the series colours	High	`clusteredBarChart`	✓
100% stacked bar	NATIVE	100% stacked bar chart	High	`hundredPercent-StackedBarChart`	✓
Stacked column	NATIVE	Stacked column chart	High	`columnChart`	✓
Clustered column	NATIVE	Clustered column chart; axis titles and visibility as in the report	High	`clusteredColumnChart`	✓
100% stacked column	NATIVE	100% stacked column chart	High	`hundredPercent-StackedColumnChart`	✓
LINES AND AREAS					
Line	NATIVE	Line chart; every category label shown up to 60 points	High	`lineChart`	✓
Area · stacked · 100%	NATIVE	Area, stacked area and 100% stacked area charts	High	`areaChart, stackedAreaChart, …`	✓
Line and stacked column	NATIVE	Combo chart: stacked columns, line values (Y2) on a secondary axis, read once per category even with a legend	High	`lineStacked-ColumnComboChart`	✓
Line and clustered column	NATIVE	Combo chart with clustered columns and secondary-axis lines	High	`lineClustered-ColumnComboChart`	✓

POWER BI VISUAL	STRATEGY	EXCEL OUTPUT	FIDELITY	RECOGNISED BY	TEST
PARTS, FLOWS AND SPREAD					
Pie · Donut	NATIVE	Pie / doughnut chart in the slice colours; slice colours on the category cells	High	`pieChart, donutChart`	✓
Scatter · bubble	NATIVE	Scatter chart; a bubble chart when Size is set; X, Y and Size from the report's field wells; a series per legend value	High	`scatterChart`	✓
Waterfall	CONSTRUCTED	Stacked columns on a hidden running base, in the increase / decrease / total colours	High	`waterfallChart`	✓
Funnel	CONSTRUCTED	Centred bars on a hidden offset, largest stage on top, values in the middle	High	`funnel`	✓
Ribbon	APPROXIMATE	Stacked column chart: the same values and colours; the ribbons between columns aren't drawn	Medium	`ribbonChart`	✓
TABLES AND MATRICES					
Table	NATIVE	Excel Table with filters; the report's colour scales, rules, data bars and icons; a live totals row (SUBTOTAL, follows Excel filters); table sparklines as Excel sparklines that stay right after sorting	High	`tableEx`	✓
Matrix	CONSTRUCTED	Column fields pivoted into columns with live Total columns; one row field: an Excel Table with a totals row; a row hierarchy: Power BI's stepped layout with group totals and Excel outline levels to fold groups	High	`pivotTable`	✓
CARDS AND KPIS					
Card	CONSTRUCTED	KPI tile: label, large value, compact value for very long numbers; value colour and accent from the report	High	`card`	✓
New card	CONSTRUCTED	One tile per measure, side by side as Power BI draws them, each with its reference labels as sub-rows	High	`cardVisual`	✓
Multi-row card	CONSTRUCTED	Tile with the first field large and the others as sub-rows	High	`multiRowCard`	✓
KPI	CONSTRUCTED	Trend card: latest value in the status colour, "Goal: x (±y%)", an Excel sparkline of the trend, "Target met / not met" from the theme's good / neutral / bad colours	High	`kpi`	✓
Gauge	CONSTRUCTED	Tile led by the gauge's value, target / minimum / maximum beneath	High	`gauge`	✓

POWER BI VISUAL	STRATEGY	EXCEL OUTPUT	FIDELITY	RECOGNISED BY	TEST
HIERARCHIES AND MAPS					
Treemap	TABLE	Table with each group's cells in its tile colour	Medium	`treemap`	✓
Map · Filled map · Azure map · Shape map	TABLE	Locations and values as a table, bubble / fill colours kept; Excel has no maps	Medium	`map, filledMap, azureMap, shapeMap`	✓
Decomposition tree	TABLE	The analysed value by its explain-by fields, as a table	Medium	`decompositionTreeVisual`	✓
SLICERS					
Slicer · button · list · text	FILTER CHIP	"Field selection" chips in the sheet's filter bar; hidden slicers count, they still filter	High	`slicer, advancedSlicerVisual, listSlicer, textSlicer`	✓
NO DATA, OR NOT EXPORTABLE					
Text box · image · shape · buttons · navigators · smart narrative	NO DATA	Left out quietly: they hold no data	–	`textbox, image, basicShape, actionButton, pageNavigator, …`	✓
Key influencers · Q&A · R · Python · paginated report · Power Apps · Power Automate	NOT EXPORTABLE	Power BI doesn't export their data; the sheet's notes name each one	–	`keyDriversVisual, qnaVisual, scriptVisual, …`	part

AppSource visuals

Recognised by their type name; each is rebuilt the way its own code draws it.

VISUAL	EXCEL OUTPUT
Deneb	Table; colours from a colour field in the data
Double Donut	Inner ring colours on the category, outer ring shades on the subcategory
Nested Bars	A row per category: total and chosen subset, in the bar colours
Comparison Table	The visual's grid with data bars
Progress Icon	KPI tile led by its value, icon colour as the cap
Date Range Picker · Timeline · Chiclet · Text filter · Attribute slicer	Filter chips
Dual KPI	Two trend cards with sparklines, "Last N days"
Histogram	The visual's bins with summed frequency
Bullet · Gantt · Mekko · Stream · Radar · Tornado · Sankey · Word cloud · Sunburst · Aster	Tables in each visual's own colours
Any other AppSource visual	Table in theme colours per value, with a note

Verification

Run on the ExportTest report, in both modes.

105/105
automated checks pass

0
Excel repair prompts

31
native Excel charts

20
pages, both modes

- Every page replayed through the export with the rows Power BI would send; structural checks clean (headers, merges, hidden rows).
- Both workbooks opened in desktop Excel: charts, sparklines, data bars, tables and 142 live formulas all load.
- Sorting a table with sparklines keeps every line on its own row (checked in Excel).
- Each page compared with Power BI Desktop side by side (separate document).

Known limits

- Totals are filled only where adding the rows gives Power BI's total (sums, counts, min / max, additive measures); ratios, averages and distinct counts are left blank.
- Table sparklines need permission to query the semantic model (Build); otherwise a note names them.
- New-card reference labels appear when Power BI includes them in the export.
- Maps, treemaps and decomposition trees are tables: Excel has no equivalent chart.
